Introducing the newest MCC Line-up..... The Evolution E9000!

GE's newest motor control line offers:

- ? Design flexibility
- ? Performance
- ? Personnel and equipment protection
- ? Ease of maintenance

The Evolution features:

- ? Drawing Software
- ? 50% smaller Size 1 FVNR Starters
- ? Plug in Stabs
- ? Horizontal Handles
- ? Swing out devices for full bucket access
- ? Bus Compatability with 7700, 8000, and Spectra MCC's!

Let us assist you with your next Motor Control Center!

GE Fanuc introduces the PAC System RX3i...winner of the Control Engineering Editor's Choice Award

The new PACSystems RX3i features a high-speed, PCI-based backplane and Pentium® 300 MHz CPU. High-capacity power supplies can be deployed in single or multiple configurations to provide adequate power or redundancy in one rack. The PACSystems RX3i also features faster I/O with expanded diagnostics and interrupts as well as hot insertion. The system supports a wide range of I/O and includes discrete, universal analog, high-density analog, high-speed counter, and

motion and is compatible with existing Series 9030 modules. Extensive communications capabilities include integrated Ethernet and Profibus™ modules as well as support for DeviceNet™ and Genius® networks.

IO Max...GE Fanuc's Rugged New DIN Rail Computer

This new PC provides a low-power, 333 MHz Geode GX1 processor, integrated 2D graphics, and numerous ports including 10/100 Ethernet. Operating system support is available for Windows NT®, Windows® 2000, VxWorks, and Linux.

Do you want a personalized webpage with your plant's production data? Get infoAgent!

infoAgent™ is Intellution's exciting new web-based tool for accessing, analyzing and visualizing production information. Gather information from many data sources within your plant, from business systems to control systems, and present it graphically, in real-time, on your own webpage.

infoAgent presents an overall view of Key Performance Indicators and other metrics necessary to run processes in a more efficient manner, empowering you to focus on continuous improvement.

Protect yourself and your people with.....Honeywell Safety Products

Electromechanical Safety Switches

Honeywell is the worldwide leader in advanced switching and sensing technology--especially in the area of industrial safety. We offer both electromechanical safety switches and electronic safety sensors as well as safety control modules for safety applications in all categories of risk. Customers can count on our diverse product line to meet all of their machine safety applications.

ECOLINE...Power for Automation

Weidmuller's ConnectPower family of power supplies has been expanded to include the new ECOLINE—economical and compact units with UL and CE approval. Like the rest of the ConnectPower family, the ECOLINE features universal 85-265VAC input, high efficiency, and DIN Rail mounting. Other features include plug and socket connections and an adjustable 24-28VDC output.

**For a limited time, get a 3A@24VDC
ECOLINE Power Supply for only \$60.00.**

Weidmüller 

EcoLine Power Supplies

Weidmuller makes the promise with ECT.

Weidmuller will now be providing ECT with detailed product information that will be added to the parts database included with ECT's **promise** control system design software. The Weidmuller parts data will also be available separately on CD-ROM and as a download from both companies' Web sites.

Some like it HOT!

Inductive sensor for use in extremely hot environments

The NCN25-F35-A2-250-V1 is ideal for the non-contact object detection of metallic objects in areas of higher temperatures up to +500°F. Whereas mechanical switches used to have to be replaced or readjusted because of wear and tear in hot and moist environments, for example in the automobile, cement & metal processing industries, the high-temperature proximity sensor from Peppert+Fuchs now offers extreme, system-related operative reliability and service friendliness.

Brad Harrison now offers a Quick Connect wiring solution for power!

Flexibility and low cost is achieved by eliminating the need for conduit to run power throughout industrial machinery. Using UL recognized Brad Power quick-connect cordsets allows a trunk/feeder line to be installed along the machine's structure with convenient access points for power to be dropped to field devices such as motors, lights, heaters and other electrical devices.
